Dermal Fillers

"Dermal Fillers" are cosmetic injectibles and are meant to treat static lines or permanent wrinkles, meaning those lines that tend to develop with time and tend to be unrelated to muscle pull or a changing facial expression. They come in many different forms, which will be discussed with you. They also may be used to treat depressed acne scars or other types of scars, and to restore lip borders. These treatments may last from months to years depending on the one chosen. **Restylane®** is one of these and is made of hyaluronic acid, usually lasting six to eight months. **Radiesse®** is 30% calcium hydroxylapatite in a 70% cellulose gel. The gel is replaced with the body's own collagen over several months. This filler is semi-permanent, may last one to three years, and has many advantages. **Juvederm®** is a new filler, which is very promising and especially good in certain areas such as the lips and tear troughs. Each type has specific advantages and disadvantages that will be discussed with you depending on your particular needs. **Sculptra®** and other fillers are occasionally used for major problems.

All precautions are taken at *Enhanced Aesthetics*, including the use of fresh fillers to ensure the ultimate sanitation and sterility. Only sterile disposable needles and syringes are used. The skin is prepared with both a topical anesthetic as well as a nerve block, if necessary, so that the very fine needle injections will not be painful. Client screening is important in order to give the best results. Patients are also provided a post treatment care and precaution sheet to assist them. Using the new cosmetic injectibles there is no need for skin tests and the patient only has minimal, or no, downtime. The patient can usually immediately pick up and resume their lifestyle. Let us assist you with your decision as to the product to best achieve your goals.
