Microdermabrasion

NewApeel Microdermabrasion System Featuring DiamondTone™ Wands

Effective for:

Sun damaged skin
 Age spots
 Age lines
 Acne scarring

Hyperpigmentation
 Scar revision
 Blackhead extraction
 Oily skin

What is NewApeel DiamondTone™ Microdermabrasion?

The **NewApeel** microdermabrasion utilizes the **DiamondTone™** wand as a medical technique for removing the topmost layer of skin, leaving it supple and vibrant. The **DiamondTone™** wand removes this layer of skin by polishing it with natural diamond chips while at the same time vacuuming the dead skin cells away in a controlled manner. Removing this outer layer of skin leaves a smoother surface and promotes new growth.

What are the advantages of NewApeel DiamondTone™ Wands?

This is a wonderful alternative to laser or chemical peels because it is non-invasive, non-surgical, crystal-free and no down time after treatment. Normal activities may be resumed immediately after treatment and your skin is free of redness, irritation and particle contamination. Patients experience softer, smoother and cleaner skin after the first treatment. Treatment series vary from four to ten sessions depending on the condition being treated, the skin type and a patient's overall combination treatment program.

How much discomfort will I experience?

Microdermabrasion treatments using the **NewApeel DiamondTone™** wand system are relatively painless yet effective. The **NewApeel DiamondTone™** system is regarded as more gentle than other systems even at its higher settings, while still maintaining the highest results. The effectiveness is controlled by a widely adjustable vacuum in conjunction with varying coarseness of the individually guided diamond tip wands. The team at *Enhanced Aesthetics* is trained to evaluate the effectiveness of the treatment while at the same time ensuring your comfort. Because exfoliation occurs only as the wand is drawn across the skin, there are no crystals being blasted against the skin, and no residue left on your skin, clothes, and the environment.

How will I look after the treatment?

Your skin may look slightly flushed immediately after treatment, but should return to normal within 1-2 hours. Your skin will look and feel smoother and more youthful even after the first treatment and will continue to improve with additional treatments. You will always want to protect your face with sunscreen following a treatment.
