Facials

An important part of the Full Effect program includes a customized facial regimen. Therapeutic as well as relaxing, a European facial lasts one hour and includes a skin analysis, cleansing, steam to open pores, exfoliation, extractions, if necessary, facial massage, mask, hand and arm massage, toner and moisturizer with a licensed esthetician. Getting a facial every 5-6 weeks is essential to the patient who wants to maximize the results of microdermabrasion or light treatments. Skin care products often used in conjunction with facials are listed under "**Skin Care Products**" on the main menu.

Waxing

Liquid epilation or "**waxing**" is a quick, efficient method of removing unwanted body hair. The procedure is safe, easy and gives results that last several weeks because the hair is removed from the root. Although waxing is not a permanent method of hair removal, with repeated waxing, the follicles tend to weaken and hair growth becomes sparser. Any hair bearing area can be waxed as long as the growth is at least a ¼ inch long.

Chemical peels

Various types of peels are offered depending on the patients needs. These vary by skin type, severity of problem and strength needed.

Microdermabrasion

See menu for detailed listing of indications, contraindications and methods.
